PROFESSIONAL SUMMARY

Full-stack engineer with 7 years building and shipping production web applications across React, Next.js, Node.js/NestJS, and Angular, with TypeScript throughout. Founder of a live AI SaaS, so comfortable owning every layer of the stack, from product thinking and architecture to frontend, API, database, and deployment. Uses AI tools aggressively in daily workflow to ship faster without sacrificing quality. Thrives in high-autonomy, remote environments, brings strong architectural opinions, and cares about the end user and the business value behind the code.

CORE SKILLS

Frontend: React, Next.js (App Router), Angular (2 to 20), TypeScript, JavaScript (ES6+), React Hooks & Context, RxJS, NgRx, Tailwind CSS, Angular Material, HTML5, CSS3

Backend: Node.js, NestJS, Express.js, REST API design & versioning, GraphQL, Prisma, serverless (AWS Lambda)

Databases: PostgreSQL (Supabase), MongoDB, DynamoDB, SQLite

Cloud & DevOps: AWS (Lambda, S3, CloudFront, SQS, EventBridge, Cognito, CloudWatch), Vercel, CI/CD (GitHub Actions, GitLab CI)

AI Engineering: Anthropic Claude API, RAG pipelines, AI-assisted development (Claude Code, Cursor), OpenAI-based workflows

Testing & Quality: Jest, Karma, unit testing, code reviews, performance optimization, debugging

Practices: Full-stack ownership, modular architecture, clean code, Agile/Scrum, product-first delivery, technical mentorship

PROFESSIONAL EXPERIENCE

Founder & Full-Stack Engineer, **Archivolt** (archivolt.dev)

2026 – Present

- Designed, built, and shipped a production AI SaaS that turns plain-English product descriptions into software architecture blueprints, using Next.js (App Router), React, and TypeScript. archivolt.dev
- Built the entire stack solo: Next.js frontend, Node serverless API routes, PostgreSQL (Supabase), authentication, and subscription billing, deployed on Vercel with CI/CD.
- Integrated the Anthropic Claude API as the core generation engine, with prompt design, structured output handling, and usage controls.
- Used AI tooling (Claude Code, Cursor) aggressively to ship fast as a solo founder, owning product, architecture, and engineering decisions end to end.
- Deliver freelance full-stack work productionizing AI-generated prototypes (Lovable, v0, Bolt) into maintainable React/Next.js and Node applications for clients.

Senior Software Engineer, **ICOMMUNIX**

Aug 2023 – Mar 2026

- Built and maintained enterprise web applications with Angular and TypeScript, owning features end to end across the stack.
- Developed RESTful Web APIs and serverless Node.js (AWS Lambda) services with clean, versioned data contracts.
- Built AI-powered conversational assistant features integrated into the product.
- Implemented secure authentication and authorization (OAuth2 / OpenID Connect via Amazon Cognito, JWT).

- Managed AWS deployments and CI/CD automation (S3, CloudFront, GitHub Actions) with monitoring via CloudWatch.
- Established reusable component libraries and a shared design system; mentored junior developers and contributed to architectural decisions.

Software Engineer, TenX

Apr 2022 – Aug 2023

- Migrated legacy AngularJS applications to modern Angular and built data-heavy dashboards using RxJS reactive programming.
- Developed reusable UI components and optimized REST API integrations with backend teams for faster, regression-free delivery.
- Participated in agile ceremonies, code reviews, and frontend quality improvements.

Software Engineer, 3S Solutions Pvt Ltd

Jun 2021 – Mar 2022

- Built reusable, accessible Angular components and implemented lazy loading for scalable single-page applications.
- Integrated REST APIs and translated complex business workflows into maintainable frontend solutions.
- Improved frontend performance and maintainability through targeted refactoring.

Software Engineer, TechnoCares

Jan 2019 – Jun 2021

- Developed enterprise web applications for automotive, insurance, and real estate platforms, including workflow-driven modules and dynamic form systems.
- Collaborated with product, backend, and QA teams in agile environments to ship usable, performant features.

SELECTED PROJECTS

- **sightseeing-p2p-engine (Next.js 15):** Real-time peer-to-peer sightseeing marketplace built with Next.js 15, Auth.js, Prisma, and the Agora SDK for low-latency live streaming. (private repo)
- **nextjs-stripe-plans (Next.js, Stripe):** Next.js App Router demo implementing a pricing/plans page and full Stripe Checkout subscription flow with hosted checkout and success/cancel handling. github.com/kamran011/nextjs-stripe-plans
- **Currency Converter (Angular, NestJS):** Full-stack converter with an Angular (standalone + signals) frontend and a NestJS backend that proxies a third-party API so keys never reach the browser; deployed across Netlify and Railway. github.com/kamran011/ng-nest-currency-converter
- **dx-react-htmleditor-adv-tables (React):** Extended the DevExtreme React HtmlEditor and underlying Quill engine to support advanced table cell merging and splitting with persistent grid attributes. github.com/kamran011/dx-react-htmleditor-adv-tables
- **Angular-Python-RAG (AI / RAG):** RAG chatbot with an Angular frontend and a Python backend supporting PDF upload and Ollama / Gemini models. github.com/kamran011/Angular-Python-RAG

EDUCATION

BS Computer Science, Virtual University of Pakistan

CERTIFICATIONS

- AWS Certified Cloud Practitioner (2024 – 2027)
- System Design Fundamentals, Pearson via Coursera (2026)
